PLUGIN ALLIANCE

BRAINWORX - bx_yellowdrive

Overdrive Effect Stomp Box
Guitar Overdrive for Your Rig

Thank you for using the BRAINWORX bx_yellowdrive plugin.

The bx_yellowdrive was developed to be used in combination with virtual amplifier simulations in your DAW. Insert it before (or even after) any amplifier plugin or other effects in your chain to achieve awesome distortion on any signal. Get creative!

Based on the famous Boss SD-1 Super OverDrive®, the developers at Brainworx have undergone intense listening tests and faithfully modeled this plugin stomp pedal to sound astoundingly similar to the real hardware.

Legal Disclaimer: Boss™ and SD-1 are registered trademarks of Roland, Inc. bx_yellowdrive was developed by Brainworx Music and Media GmbH based on its own modeling techniques. Roland has not endorsed nor sponsored the bx_yellowdrive in any manner, nor licensed any intellectual property for use in this product.

Developed under license by Brainworx GmbH Germany for Plugin Alliance LLC USA.

BRAINWORX - bx_yellowdrive

Overdrive Effect Stomp Box
Guitar Overdrive for Your Rig

TONE

LEVEL

DRIVE

bx_yellowdrive   brainworx

(1) LEVEL
Adjusts the post-processing level of output from the bx_yellowdrive. Use it to match between Dry and Wet signals.

(2) DRIVE
Controls the amount of harmonic distortion added to the input signal. Leftmost is relatively subtle tone coloration, while rightmost will produce extreme results.
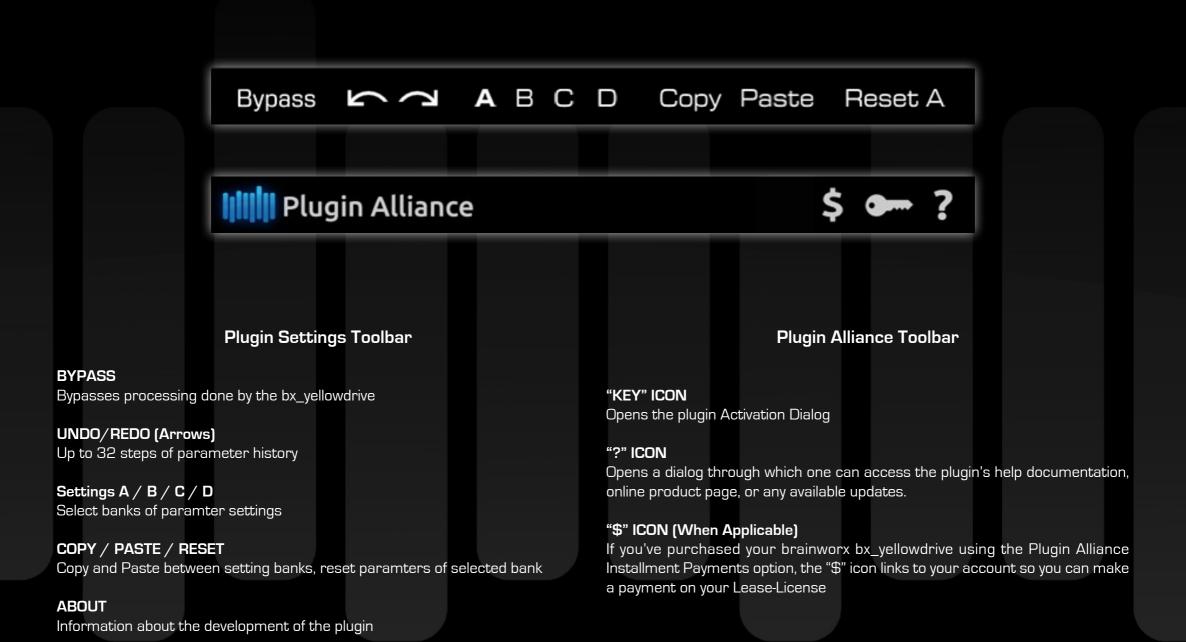

(3) TONE
Varies the tone coloration of the processed signal; settings on the left will produce softer low frequency tones, while settings on the right will produce crisp highs.

(4) Stomp Switch
Pedal-style on/off button, for that guitar rig feel.
